

6. PARMENIDES OF ELEA

The most reliable reports on the life of Parmenides of Elea (an Italian town today called Velia near what is now Naples) imply that he was born around 515 BCE. Diogenes Laertius says that he was a pupil of Xenophanes, “but did not follow him” (i.e., he did not adopt Xenophanes’ views). Diogenes Laertius also says that Parmenides was, at some time in his life associated with the Pythagoreans. There is no way of knowing whether or not these reports are true, but it seems clear that Parmenides is concerned with answering questions about knowledge that are generated by Xenophanes’ views. (It is less clear that, as sometimes claimed, Xenophanes’ account of his greatest god [see Chapter 4 fragment 13] influenced Parmenides’ account of what-is.) It would not be surprising that Parmenides should know about Pythagoreanism, as Elea is in the southern part of Italy, which was home to the Pythagorean movement.

Like Xenophanes, Parmenides wrote in verse: His poem is in Homeric hexameters, and there are many Homeric images, especially from the Odyssey. In the poem Parmenides presents a young man (kouros, in Greek), who is taken in a chariot to meet a goddess. He is told by her that he will learn “all things”; moreover, while the goddess says that what the kouros is told is true, she stresses that he himself must test and assess the arguments she gives. Parmenides is one of the most important and most controversial figures among the early Greek thinkers, and there is much disagreement among scholars about the details of his views. The poem begins with a long introduction (The Proem, B1); this is followed by a section traditionally called Truth (B2–B8.50). This is followed by the so-called Doxa section (“beliefs” or “opinions”)—a cosmology that, the goddess warns, is in some way deceptive. In Truth, Parmenides argues that genuine thought and knowledge can only be about what genuinely is (what-is), for what-is-not is literally unsayable and unthinkable. Parmenides warns against what he calls the “beliefs of mortals,” based entirely on sense-experience; in these, the goddess says, “there is no true trust.” Rather, one must judge by understanding (the capacity to reason) what follows from the basic claim that what-is must be, and what-is-not cannot be. The poem proceeds (in the

crucial fragment B8) to explore the features of genuine being: What-is must be whole, complete, unchanging, and one. It can neither come to be nor pass away, nor undergo any qualitative change. Only what is in this way can be grasped by thought and genuinely known.

Given these arguments, the accounts of the way things are given by Parmenides' predecessors cannot be acceptable. The earlier views required fundamental changes in their theoretically basic entities, or relied on the reality of opposites and their unity; Parmenides argues that all these presuppose the reality of what-is-not, and so cannot succeed. For modern scholars, one particularly intriguing aspect of Parmenides' thought is that, having apparently rejected the world of sensory experience as unreal, the goddess then goes on, in the Doxa, to give a cosmological account of her own. Is this meant to be a parody of other views? Is it the best that can be said for the world that appears to human senses? Is it a lesson for the hearer, to test whether any cosmology could ever be acceptable on Parmenidean grounds? There is little agreement among Parmenides' readers on this. While Parmenides clearly shares with Xenophanes and Heraclitus interests in metaphysical and epistemological questions, Parmenides is the first to see the importance of metatheoretical questions about philosophical theories themselves, and to provide comprehensive arguments for his claims. These arguments are powerful, and Parmenides' views about knowledge, being, and change were a serious theoretical challenge, not only to later Presocratic thinkers, but also to Plato and Aristotle.

1. (28B1) The mares which carry me as far as my spirit ever
aspired
were escorting me, when they brought me and proceeded
along the renowned route
of the goddess, which brings a knowing mortal to all cities
one by one.
On this route I was being brought, on it wise mares were
bringing me,
straining the chariot, and maidens were guiding the way.
The axle in the center of the wheel was shrilling forth the
bright sound of a musical pipe,
ablaze, for it was being driven forward by two rounded
wheels at either end, as the daughters of the Sun

5

were hastening to escort <me> after leaving the house of
 Night
 for the light, having pushed back the veils from their heads
 with their hands. 10

There are the gates of the roads of Night and Day,
 and a lintel and a stone threshold contain them.
 High in the sky they are filled by huge doors
 of which avenging Justice holds the keys that fit them.
 The maidens beguiled her with soft words 15
 and skillfully persuaded her to push back the bar for them
 quickly from the gates. They made
 a gaping gap of the doors when they opened them,
 swinging in turn in their sockets the bronze posts
 fastened with bolts and rivets. There, straight through them
 then, 20
 the maidens held the chariot and horses on the broad road.
 And the goddess received me kindly, took my
 right hand in hers, and addressed me with these words:
 Young man, accompanied by immortal charioteers,
 who reach my house by the horses which bring you, 25
 welcome—since it was not an evil destiny that sent you
 forth to travel
 this route (for indeed it is far from the beaten path of
 humans),
 but Right and Justice. It is right that you learn all things—
 both the unshaken heart of well-persuasive¹ Truth
 and the beliefs of mortals, in which there is no true trust. 30
 But nevertheless you will learn these too—how it were
 right that the things that seem
 be reliably, being indeed, the whole of things.

(lines 1–30: Sextus Empiricus, *Against the Mathematicians*
 7111–14; lines 28–32: Simplicius, *Commentary on*
Aristotle's On the Heavens, 557.25–558.2; tmpc)

2. (B2) But come now, I will tell you—and you, when you have
 heard the story, bring it safely away—
 which are the only routes of inquiry that are for thinking:

1. The manuscript text of this word varies; another reading is translated “well-
 rounded Truth.”

the one, that is and that it is not possible for it not to be,
 is the path of Persuasion (for it attends upon Truth),
 the other, that it is not and that it is right that it not be, 5
 this indeed I declare to you to be a path entirely unable to
 be investigated:

For neither can you know what is not (for it is not to be
 accomplished)
 nor can you declare it.

(Proclus, *Commentary on Plato's Timaeus* 1.345.18; lines 3–8;
 Simplicius, *Commentary on Aristotle's Physics* 116.28; tmpc)

3. (B3) . . . for the same thing is for thinking and for being.²
 (Clement, *Miscellanies* 6.23; Plotinus, *Enneads* 5.1.8)

4. (B4) But gaze upon things which although absent are securely
 present to the mind.

For you will not cut off what-is from clinging to what-is,
 neither being scattered everywhere in every way in order
 nor being brought together.

(Clement, *Miscellanies* 5.15)

5. (B5) . . . For me, it is indifferent
 from where I am to begin: for that is where I will arrive back
 again.

(Proclus, *Commentary on Plato's Parmenides* 1.708)

6. (B6) It is right both to say and to think that it is what-is: for
 it can be,

but nothing is not: these things I bid you to ponder.

For I <³> you from this first route of inquiry,
 and then from that, on which mortals, knowing nothing,
 wander, two-headed: for helplessness in their 5

2. Translator's note: Alternative translations: "for the same thing both can be thought of and can be"; "for thinking and being are the same."

3. There is a lacuna (gap) in all the manuscripts at this point. Diels supplied *eirgō*, so the line would be translated "I hold you back." (This would imply that there are three routes.) Two recent suggestions from scholars supply forms of the verb *archein*, "to begin," so the goddess says either "I begin for you," or "You will begin." (This implies two routes.)

breasts steers their wandering mind. They are borne along
deaf and blind alike, dazed, hordes without judgment
for whom to be and not to be are thought to be the same
and not the same, and the path of all is backward-turning.

(Simplicius, *Commentary on Aristotle's
Physics* 86.27–28; 117.4–13; tmpc)

7. (B7) For in no way may this prevail, that things that are
not are;
but you, hold your thought back from this route of inquiry
and do not let habit, rich in experience, compel you along
this route
to direct an aimless eye and an echoing ear
and tongue, but judge by reasoning (*logos*) the much-
contested 5
examination spoken by me.

(lines 1–2: Plato, *Sophist* 242a; lines 2–6: Sextus
Empiricus, *Against the Mathematicians* 7.114; tmpc)

8. (B8) . . . Just one story of a route
is still left: that it is. On this [route] there are signs
very many, that what-is is ungenerated and imperishable,
a whole of a single kind, unshaken, and complete. 5
Nor was it ever, nor will it be, since it is now, all together
one, holding together: For what birth will you seek out for it?
How and from what did it grow? From what-is-not I will
allow
you neither to say nor to think: For it is not to be said or
thought
that it is not. What need would have roused it,
later or earlier, having begun from nothing, to grow? 10
In this way it is right either fully to be or not.
Nor will the force of true conviction ever permit anything
to come to be
beside it from what-is-not. For this reason neither coming
to be
nor perishing did Justice allow, loosening her shackles,
but she [Justice] holds it fast. And the decision about these
things is in this: 15
is or is not; and it has been decided, as is necessary,

to leave the one [route] unthought of and unnamed (for it is
not a true

route), so that the other [route] is and is genuine.

But how can what-is be hereafter? How can it come to be?

For if it came to be, it is not, not even if it is sometime going
to be. 20

Thus coming-to-be has been extinguished and perishing
cannot be investigated.

Nor is it divisible, since it is all alike,

and not at all more in any way, which would keep it from
holding together,

or at all less, but it is all full of what-is.

Therefore it is all holding together; for what-is draws near
to what-is. 25

But unchanging in the limits of great bonds

it is without starting or ceasing, since coming-to-be and
perishing

have wandered very far away; and true trust drove them
away.

Remaining the same and in the same and by itself it lies

and so remains there fixed; for mighty Necessity 30

holds it in bonds of a limit which holds it in on all sides.

For this reason it is right for what-is to be not incomplete;

for it is not lacking; otherwise, what-is would be in want of
everything.

What is for thinking is the same as that on account of which
there is thought.

For not without what-is, on which it depends, having been
solemnly pronounced, 35

will you find thinking; for nothing else either is or will be

except what-is, since precisely this is what Fate shackled
to be whole and changeless. Therefore it has been named all
things

that mortals, persuaded that they are true, have posited

both to come to be and to perish, to be and not, 40

and to change place and alter bright color.

But since the limit is ultimate, it [namely, what-is] is
complete

from all directions like the bulk of a ball well-rounded from
all sides

equally matched in every way from the middle; for it is
 right
 for it to be not in any way greater or lesser than in another. 45
 For neither is there what-is-not—which would stop it from
 reaching
 the same—nor is there any way in which what-is would be
 more than what-is in one way
 and in another way less, since it is all inviolable;
 for equal to itself from all directions, it meets uniformly
 with its limits.

At this point, I end for you my reliable account and thought 50
 about truth. From here on, learn mortal opinions,
 listening to the deceitful order of my words.
 For they established two forms to name in their judgments,⁴
 of which it is not right to name one—in this they have gone
 astray—

and they distinguished things opposite in body, and
 established signs 55
 apart from one another—for one, the aetherial fire of flame,
 mild, very light, the same as itself in every direction,
 but not the same as the other; but that other one, in itself
 is opposite—dark night, a dense and heavy body.
 I declare to you all the ordering as it appears, 60
 so that no mortal judgment may ever overtake you.

(Simplicius, *Commentary on Aristotle's Physics* 145.1–
 146.25 [lines 1–52]; 39.1–9 [lines 50–61]; tmpc)

9. (B9) But since all things have been named light and night
 and the things which accord with their powers have been
 assigned to these things and those,
 all is full of light and obscure night together,
 of both equally, since neither has any share of nothing.
 (Simplicius, *Commentary on Aristotle's Physics* 180.9–12)

10. (B10) You shall know the nature of the Aithēr and all the
 signs in the Aithēr

4. Translator's note: Other manuscripts give a different form of the word rendered "judgment" that requires another translation: "established judgments" (i.e., decided).

and the destructive deeds of the shining sun's pure
 torch and whence they came to be,
 and you shall learn the wandering deeds of the round-faced
 moon
 and its nature, and you shall know also the surrounding
 heaven, 5
 from what it grew and how Necessity led and shackled it
 to hold the limits of the stars.

(Clement, *Miscellanies* 5.14; 138.1)

11. (B11) . . . how earth and sun and moon
 and the Aithēr that is common to all and the Milky Way and
 furthest Olympus and the hot force of the stars surged forth
 to come to be.
 (Simplicius, *Commentary on Aristotle's On the Heavens* 559.22–25)

12. (B12) For the narrower <wreaths> were filled with unmixed
 fire,
 the ones next to them with night, but a due amount of fire is
 inserted among it,
 and in the middle of these is the goddess who governs all
 things.
 For she rules over hateful birth and union of all things,
 sending the female to unite with male and in opposite
 fashion, 5
 male to female.

(Simplicius, *Commentary on Aristotle's Physics*
 39.14–16 [lines 1–3], 31.13–17 [lines 2–6])

13. (B13) First of all gods she contrived Love.
 (Simplicius, *Commentary on Aristotle's Physics* 39.18)

14. (B14) Night-shining foreign light wandering around earth.
 (Plutarch, *Against Colotes* 1116A)

15. (B15) Always looking toward the rays of the sun.
 (Plutarch, *On the Face in the Moon* 929A)

16. (B16) As on each occasion there is a mixture of the much-
 wandering limbs,

so is mind present to humans; for the same thing
is what the nature of the limbs thinks in men,
both in all and in each; for the more is thought.

(Theophrastus, *On the Senses* 3; tpc)

17. (B17) [That the male is conceived in the right part of the uterus has been said by others of the ancients. For Parmenides says:]
<The goddess brought> boys <into being> on the right <side of the uterus>, girls on the left.
(Galen, *Commentary on Book VI of Hippocrates' Epidemics* II 46)
18. (B18) As soon as woman and man mingle the seeds of love
<that come from> their veins, a formative power fashions
well-constructed bodies
from their two differing bloods, if it maintains a balance.
For if when the seed is mingled the powers clash
and do not create a single <power> in the body resulting from
the mixture,
with double seed they will dreadfully disturb the nascent sex
<of the child>.
(Caelius Aurelianus, *On Chronic Diseases* VI.9)
19. (B19) In this way, according to opinion (*doxa*), these things have
grown and now are
and afterwards after growing up will come to an end.
And upon them humans have established a name to mark each
one.
(Simplicius, *Commentary on Aristotle's On the Heavens* 558.9–11)

Suggestions for Further Reading
